The Importance of Process Control PROCESS Process as used in the terms process control and process industry, refers to the methods of changing or refining raw materials to create end products. The raw materials, which either pass through or remain in a liquid, gaseous, or slurry (a mix of solids and liquids) state during the process, are transferred, measured, mixed, heated or cooled, filtered

### **Introduction - homepages.rpi.edu**

process gain is the sensitivity of a process output to a change in the process input. If an increase in a process input leads to an increase in the process output, this is known as a positive gain. If, on the other hand, an increase

in the process input leads to a decrease in the process output, this is known as a negative gain. The magnitude of the process gain is also important. For example
