infected with dengue viruses or immunized with dengue antigens had anamnestic immune responses (240, 250). Casals and Brown used carefully standardized hemaggluti- The dengue viruses. - ncbi.nlm.nih.gov

[Abstract. Dengue, a major public health problem throughout subtropical and tropical regions, is an acute infectious disease characterized by biphasic fever, headache, pain in various parts of the body, prostration, rash, lymphadenopathy, and leukopenia.](#)

[Dengue viruses an overview](#)

Dengue viruses (DENVs) cause the most common arthropod-borne viral disease in man with 50-100 million infections per year. Because of the lack of a vaccine and antiviral drugs, the sole measure of control is limiting the Aedes mosquito vectors.

[mhf official blog: Dengue Viruses](#)

The dengue virus has a roughly spherical shape. Inside the virus is the nucleocapsid, which is made of the viral genome and C proteins. The nucleocapsid is surrounded by a membrane called the viral envelope, a lipid bilayer that is taken from the host.

[WHO | What is dengue?](#)

Dengue flourishes in urban poor areas, suburbs and the countryside but also affects more affluent neighbourhoods in tropical and subtropical countries. Dengue is a mosquito-borne viral infection causing a severe flu-like illness and, sometimes causing a potentially lethal complication called severe dengue.

[Dengue Fever Symptoms, Causes, Treatment & Vaccine](#)

Dengue fever is a disease caused by a family of viruses

transmitted by mosquitoes. It is an acute illness of sudden onset that usually follows a benign course with symptoms such as headache, fever, exhaustion, severe muscle and joint pain, swollen lymph nodes (lymphadenopathy), and rash.

Dengue | CDC

Dengue is caused by any one of four related viruses transmitted by mosquitoes. There are not yet any vaccines to prevent infection with dengue virus and the most effective protective measures are those that avoid mosquito bites. When infected, early recognition and prompt supportive treatment can substantially lower the risk of medical complications and death.

Dengue fever: Symptoms, treatment, and prevention

Dengue fever, also known as breakbone fever, is a mosquito-borne infection that can lead to a severe flu-like illness. It is caused by four different viruses and spread by *Aedes* mosquitoes.

Dengue fever - Wikipedia

Dengue fever is a mosquito-borne tropical disease caused by the dengue virus. Symptoms typically begin three to fourteen days after infection. [2] This may include a high fever , headache , vomiting , muscle and joint pains , and a characteristic skin rash .

Frequently Asked Questions | Dengue | CDC

Dengue (pronounced den gee) is a disease caused by any one of four closely related dengue viruses (DENV 1, DENV 2, DENV 3, or DENV 4). The viruses are transmitted to humans by the bite of an infected mosquito.
