Learning Curve for Radiofrequency Ablation of Liver Tumors

Radiofrequency ablation (RFA) is a relatively new and minimally invasive therapy for primary and metastatic liver tumors. Early studies have suggested that this is an effective and safe technique for treating liver tumors. 1-6 As a result, RFA is gaining popularity as the preferred modality of local ablation for unresectable liver tumors in (PDF) Liver Surgery Planning Using Virtual Reality A rational liver surgery can be planned by analyzing the structures of the three liver vascular trees (portal vein, hepatic vein, and hepatic artery) in LDLT and the spatial relationship between a

Impact of time to surgery in the outcome of patients with ...

In the field of liver resection for primary liver tumors, only two studies have thus far analyzed the impact of lead time on outcomes following resection. [12] , [34] The first report included 350 patients with various primary hepatobiliary tumors. 12 A time delay >1 month from presentation until referral emerged as an independent predictor of decreased overall survival in resectable patients.

Table of Contents: Page: Cross Reference Policy

This policy describes the use of liver transplantation, the act of surgically removing the diseased liver of a patient and replacing it with a healthy liver graft from a donor.

The engrafted liver may be all or part of a liver removed from a brain-dead donor or a portion of a liver from a healthy living donor. Liver transplantation may be a lifesaving procedure for patients with chronic end
