**Introduction to Charge Controllers What Is A Charge Controller?** A charge controller is an essential part of nearly all power systems that charge batteries, whether the power source is PV, wind, hydro, fuel, or utility grid. **Solar Charge Controller Basics | Northern Arizona Wind & Sun**

A charge controller, or charge regulator, is basically a voltage and/or current regulator to keep batteries from

overcharging. It regulates the voltage and current coming from the solar panels going to the battery. Most "12 volt" panels put out about 16 to 20 volts, so if there is no regulation the batteries will be damaged from overcharging.

#### ARDUINO SOLAR CHARGE CONTROLLER (Version 2.0)

The charge controller is designed by taking care of the following points. 1.Prevent Battery Overcharge: To limit the energy supplied to the battery by the solar panel when the battery becomes fully charged.This is implemented in charge\_cycle() of my code.
