5.6 Soil Erosion in Iceland: Reclaiming a Fragile Environment Leslie M. Beauchamp. Centuries of human activity in a fragile volcanic environment is eroding soils and vegetation in Iceland.

Volcanic soils of Iceland - ScienceDirect

The parent materials of all Icelandic soils are volcanic in origin, and most of the soils are classified as Andosols. Iceland has the largest area of Andosols in Europe, and may have >5% of all Andosols in the world.

Iceland - Wikipedia

Iceland is a Nordic island country in the North Atlantic, with a population of 357,050 and an area of 103,000 km². Permanent human settlement greatly disturbed the isolated ecosystem of thin, volcanic soils and limited species diversity. The forests were heavily exploited over the centuries for firewood and timber.

Soils in Ireland - Ask About Ireland

The general consensus is that Irish soil quality is good overall. Soil formation is very complex and differs on a range of factors. One of these is leaching (washing out) and it is prominent in Ireland since the water movement here is mainly downwards, which leaves the soil very acidic.
